Flight Plans

ADDING a Waypoint

1	PRESS **FPL** to on the MFD
2	ROTATE Small FMS Knob to view Flight Plan Catalog (FPL2)
3	PRESS the FMS Knob to activate the cursor.
4	ROTATE Large FMS Knob to highlight the flight plan to be modified.
5	PRESS **ENT**.
6	ROTATE Large FMD Knob to highlight the waypoint which will <u>follow</u> the to-be-added waypoint.
7	ROTATE the Small FMS Knob to open the Waypoint Information window with the IDENT Field highlighted.
8	ROTATE Small FMS Knob to select the desired character.
9	ROTATE Large FMS Knob to move the cursor.
10	Continue to use the Large and Small FMS Knobs to **DIAL IN** the remainder of the waypoint identifier.

NOTE: as the last character of the waypoint is entered, the symbol, facility name and city/state appear. Also the small map shows the waypoint entered.

11	PUSH **ENT** to add the waypoint.

NOTE: If there was another waypoint in the database with the same identifier the Duplicate Waypoints window appears. ROTATE the Large FMS knob to select the waypoint desired.

NOTE: Deleting a waypoint from the Active Flight Plan will not change how the flight plan is stored. It is necessary to do to the Flight Plan Page (FPL2) to remove the waypoint from the stored flight plan.

12	PRESS **ENT**. The stored Flight Plan window appears with the new waypoint added between the stations selected.
13	PRESS the FMS Knob. This turns the cursor off and the screen returns to the Flight Plan Catalogue.
14	PRESS **FPL** to return to Navigation Map Page.

NOTE: This operation can be done on the PFD if the flight plan is active.

NOTE: If the waypoint is added to the Active Flight Plan it will not change how the flight plan is stored unless you first PRESS **MENU**, ROTATE the Large FMS Knob to highlight "**Store Flight Plan**"

and PRESS **ENT** twice. The modified flight plan will be stored under a different number.
